BMR review against SOP

TITLE OF DOCUMENT

Document is Draft

BMR 2538104192-EHSII03.pdf Review against SOP Not Provided.

Header Information

Reviewer Role	Senior Quality Assurance Specialist
Bmr Id	2538104192
Sop Id	Not Provided
Date Of Validation	2025-11-14

Overall Compliance Summary

Bmr Status	⚠️ Action Required
Qa Recommendation	Batch release is on hold pending investigation and resolution of the yield calculation discrepancy, clarification of the sieving process documentation, and correction of multiple GDP violations (uncorrected strike-throughs and blank sections). A deviation report is required to address these issues before the batch can be considered for release.
Critical Observation Count	0

Discrepancy Log

Detailed Evidence	Validation Status	Ref Id	Bmr Page Section	Sop Clause Violated	Discrepancy Type	Detailed Observation	Quality Impact Assessment

The undocumented corrections are present for Sertraline Mandate (S.No. 2) in the 'Gross Qty.' and 'Net Qty.' columns, and for Caustic Soda Flakes (S.No. 3) in the 'Net Qty.' column. This repeated failure to follow proper correction procedures compromises the integrity of the raw material weighing records.	⚠️ Action Required	1	PAGE:3, List of Raw Materials and Weighing Details	Good Documentation Practices (GDP)	GDP	A few corrections made via strike-through on PAGE:3 in the 'Gross Qty.', 'Tare Qty.', and 'Net Qty.' columns are not initialed, dated, or justified with a reason, which is a direct violation of GDP principles.	Medium
---	---------------------------	----------	---	---	------------	--	---------------

PAGE:24, PAGE:25, PAGE:26, and PAGE:27 contain detailed tables for recording micronization parameters and operations. These pages are completely unfilled, with no 'N.A.' markings or authorized line-outs. Leaving critical process sections blank creates ambiguity as to whether the steps were missed or intentionally skipped. Proper GDP requires that unused sections of a BMR are clearly marked as not applicable.	⚠️ Action Required	2	PAGE:24 to PAGE:27, Micronization Operation Record	Good Documentation Practices (GDP)	GDP	The Micronization Operation Record sections (Trial Run I, II, III, and Remaining Quantity) spanning pages 24 to 27 are left blank. As these process steps were not performed, they should have been marked as 'Not Applicable' (N.A.) or struck through, signed, and dated to ensure the record is complete and unambiguous.	Medium
--	---------------------------	----------	---	---	------------	---	---------------

The executed sifting steps are recorded on PAGE:21 (Mesh Size 40) and PAGE:28 (Mesh Size 80). The final Certificate of Analysis on PAGE:101, under section 14.1, reports a result for 'Sieve analysis' with the specification '140 mesh retain > 3%'. There is no corresponding manufacturing step in the BMR that documents the use of a 140 mesh sieve. This requires clarification to ensure the BMR is a complete and accurate record of all manufacturing and control steps.	✖ Attention Required	3	PAGE:21, PAGE:28, PAGE:101	BMR Completeness / Process Documentation	Process	The BMR documents sifting operations using 40 mesh (PAGE:21) and 80 mesh (PAGE:28) screens. However, the final product Certificate of Analysis (PAGE:101) includes a test result for 'Particle Size (by Air jest Sieve analysis)' against a 140 mesh screen. The BMR contains no record of a process step involving a 140 mesh sieve, creating a documentation gap.	Low
